

Day 08 – Microsoft Entra ID App Registrations

Objective

Create an App Registration, configure a redirect URI, generate a client secret, and review the application's identity information.

Skills You'll Learn

- App Registrations
- Microsoft Entra ID
- OAuth 2.0
- OpenID Connect (OIDC)
- Client Secrets
- Application (Client) ID
- Directory (Tenant) ID

Step 1 – Open App Registrations

Go to:

Identity

Applications

App registrations

Or search for **App registrations** using the search bar.

Step 2 – Create a New App Registration

Click:

+ New registration

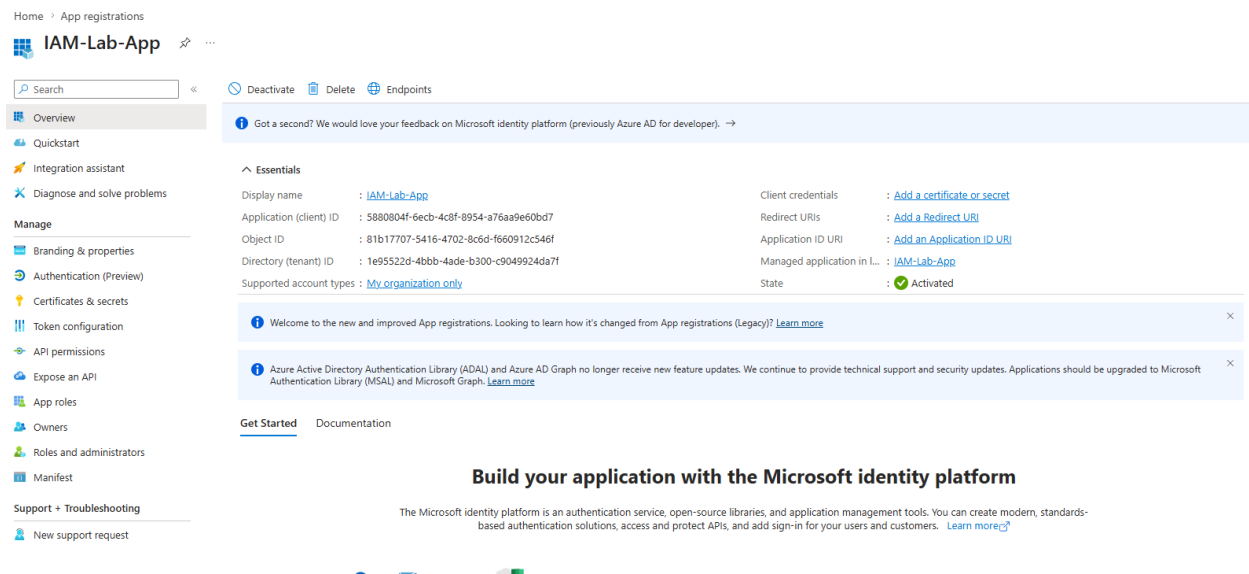

Configure:

Setting	Value
Name	IAM-Lab-App
Supported account types	Accounts in this organizational directory only
Redirect URI	Leave blank for now

Click **Register**.

Screenshot 1

- New App Registration

The screenshot shows the 'New App Registration' overview page in the Microsoft identity platform. The page title is 'IAM-Lab-App'. The left sidebar contains navigation links: Overview (selected), Quickstart, Integration assistant, Diagnose and solve problems, Manage (Branding & properties, Authentication (Preview), Certificates & secrets, Token configuration, API permissions, Expose an API, App roles, Owners, Roles and administrators, Manifest), and Support + Troubleshooting (New support request). The main content area displays the 'Essentials' section with the following details:

Display name	: IAM-Lab-App	Client credentials	: Add a certificate or secret
Application (client) ID	: 5880804f-6ecb-4c8f-8954-a76aa9e60bd7	Redirect URIs	: Add a Redirect URI
Object ID	: 81b17707-5416-4702-8c6d-f660912c546f	Application ID URI	: Add an Application ID URI
Directory (tenant) ID	: 1e95522d-4bbb-4ade-b300-c9049924da7f	Managed application in L...	: IAM-Lab-App
Supported account types	: My organization only	State	: Activated

Below the essentials section, there are two informational messages:

- Got a second? We would love your feedback on Microsoft identity platform (previously Azure AD for developer). →
- Welcome to the new and improved App registrations. Looking to learn how it's changed from App registrations (Legacy)? [Learn more](#)
- Azure Active Directory Authentication Library (ADAL) and Azure AD Graph no longer receive new feature updates. We continue to provide technical support and security updates. Applications should be upgraded to Microsoft Authentication Library (MSAL) and Microsoft Graph. [Learn more](#)

At the bottom, there is a section titled 'Build your application with the Microsoft identity platform' with a brief description and a 'Learn more' link.

Step 3 – Review the Overview Page

You'll see:

- Application (client) ID

- Directory (tenant) ID
- Object ID
- Supported account types

Welcome to the new and improved App registrations. Looking to learn how it's changed from App registrations (Legacy)? [Learn more](#)

Azure Active Directory Authentication Library (ADAL) and Azure AD Graph no longer receive new feature updates. We continue to provide technical support and security updates. Applications should be upgraded to Microsoft Authentication Library (MSAL) and Microsoft Graph. [Learn more](#)

Get Started Documentation

Build your application with the Microsoft identity platform

The Microsoft identity platform is an authentication service, open-source libraries, and application management tools. You can create modern, standards-based authentication solutions, access and protect APIs, and add sign-in for your users and customers. [Learn more](#)

Step 4 – Configure Authentication

Click:

Authentication

Click:

+ Add a platform

Choose:

Web

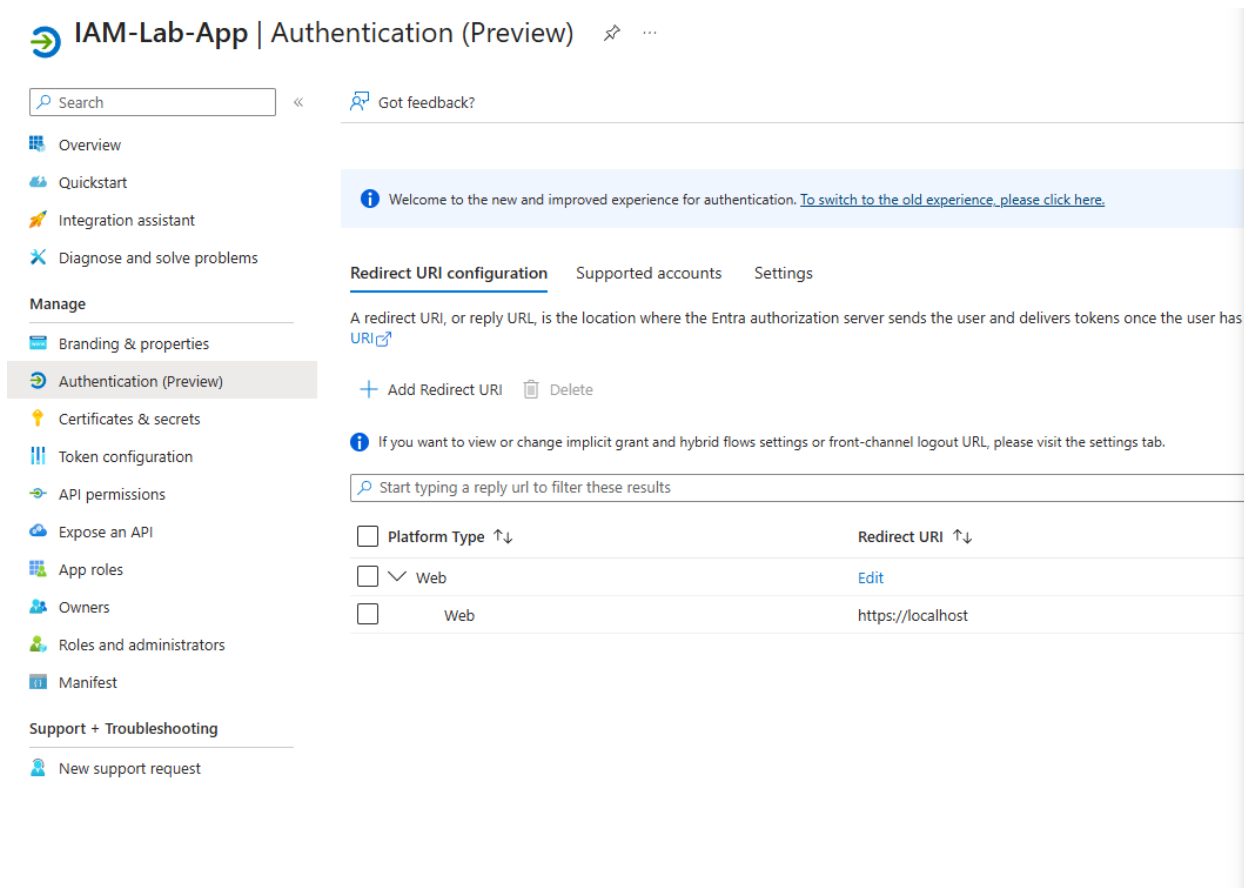

Use this Redirect URI:

<https://localhost>

Click **Configure**.

Screenshot 3

- Authentication

Step 5 – Create a Client Secret

Go to:

Certificates & secrets

Click:

+ New client secret

Configure:

Setting	Value
Description	IAM Lab Secret
Expires	180 days

Click **Add**.

Copy the secret value immediately. It is shown only once.

Screenshot 4

- Client Secret

Security note: Before uploading screenshots to GitHub, blur or crop out the actual secret value.

Home > App registrations > IAM-Lab-App

IAM-Lab-App | Certificates & secrets

Search <<  Got feedback?

Manage

- Overview
- Quickstart
- Integration assistant
- Diagnose and solve problems
- Certificates & secrets**
- Token configuration
- API permissions
- Expose an API
- App roles
- Owners
- Roles and administrators
- Manifest

Got a second to give us some feedback? →

Credentials enable confidential applications to identify themselves to the authentication service when receiving tokens at a web addressal scheme). For a higher level of assurance, we recommend using a certificate (instead of a client secret) as a credential.

Application registration certificates, secrets and federated credentials can be found in the tabs below.

Certificates (0) **Client secrets (1)** Federated credentials (0)

A secret string that the application uses to prove its identity when requesting a token. Also can be referred to as application password.

+ New client secret

Description	Expires	Value 	Secret ID
IAM Lab Secret	1/18/2027		

Support + Troubleshooting

- New support request

Step 6 – Review API Permissions

Go to:

API permissions

Observe the default permission:

- User.Read

You don't need to add any additional permissions for this lab.

New support request

Granting tenant-wide consent may revoke permissions that have already been granted tenant-wide for that application. Permissions that users have already granted on their own behalf aren't affected. [Learn more](#)

The "Admin consent required" column shows the default value for an organization. However, user consent can be customized per permission, user, or app. This column may not reflect the value in your organization, or in organizations where this app will be used. [Learn more](#)

Configured permissions

Applications are authorized to call APIs when they are granted permissions by users/admins as part of the consent process. The list of configured permissions should include all the permissions the application needs. [Learn more about permissions and consent](#)

+ Add a permission

✓ Grant admin consent for Default Directory

API / Permissions name	Type	Description	Admin consent requ...	Status
Microsoft Graph (1)				...
User.Read	Delegated	Sign in and read user profile	No	...

To view and manage consented permissions for individual apps, as well as your tenant's consent settings, try [Enterprise applications](#).
